

Management of DVT & PE

(deep vein thrombosis
& pulmonary embolism)

1. Primary prevention of VTE (venous thromboembolism), or prevention of a first venous event

Patients at risk and
undergoing orthopaedic
surgery, other types of surgery
and non-surgical patients
(e.g. critically ill medical
patients, people with cancer)

2. DVT & PE treatment

Patients who experience a
venous event rapidly and/
or severely that requires
immediate treatment

3. Prevention of recurrent DVT & PE, or secondary prevention long-term treatment

Patients at risk of recurrent
venous events. This risk
increases cumulatively over
time in patients who are
not treated
